#### **NAME**

xzgrep - search compressed files for a regular expression

### **SYNOPSIS**

```
xzgrep [grep_options] [-e] pattern [file...]
xzegrep ...
xzfgrep ...
lzgrep ...
lzegrep ...
lzfgrep ...
```

# **DESCRIPTION**

**xzgrep** invokes grep(1) on *files* which may be either uncompressed or compressed with xz(1), lzma(1), gzip(1), bzip2(1), lzop(1), or zstd(1). All options specified are passed directly to grep(1).

If no *file* is specified, then standard input is decompressed if necessary and fed to grep(1). When reading from standard input, gzip(1), bzip2(1), lzop(1), and zstd(1) compressed files are not supported.

If **xzgrep** is invoked as **xzegrep** or **xzfgrep** then **grep** –**E** or **grep** –**F** is used instead of **grep**(1). The same applies to names **lzgrep**, **lzegrep**, and **lzfgrep**, which are provided for backward compatibility with LZMA Utils.

### **EXIT STATUS**

- O At least one match was found from at least one of the input files. No errors occurred.
- 1 No matches were found from any of the input files. No errors occurred.
- >1 One or more errors occurred. It is unknown if matches were found.

## **ENVIRONMENT**

**GREP** If the **GREP** environment variable is set, **xzgrep** uses it instead of **grep**(1), **grep** –**E**, or **grep** –**F**.

#### **SEE ALSO**

```
grep(1), xz(1), gzip(1), bzip2(1), lzop(1), zstd(1), zgrep(1)
